

AutoFloorSystems™

Jockimo's patented glass flooring system is unlike any other product on the market.

Our flooring system assembles quickly and easily without screws or fasteners. Once installed it does not squeak, move or cause a tripping hazard.

It is clean, sleek and elegant allowing manufacturers and dealerships to showcase their automobiles in a high quality way.

The system can also be used for non automotive trade show floors as well.

Jockimo™

Advanced Architectural Products

The overall size of the system can be customized to match any required size or shape. The individual glass flooring panels can be provided in large sizes to minimize seam lines and provide a clean professional look to any dealership showroom, trade show presentation, or auto show.

We would love to work with you and develop a custom glass flooring display!
